

## Blocky for Veeam®

Highest protection against ransomware for your backup through fingerprint & WORM technology

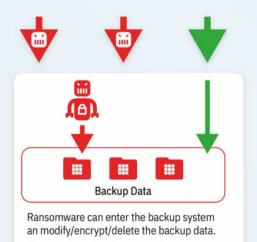

## What is Blocky

Blocky is the only ransomware protection that runs on the Veeam Windows server. It protects the backup data against ransomware corruption by creating a zero-trust, impenetrable barrier. Blocky create a fingerprint for approved processes accessing the backup data and prevents write access if the fingerprint is not explicitly matched.

# Highest protection for backup data

- Installs on Veeam Windows backup server
- No Linux or extra hardware
- Real-time alerting and event monitoring
- Tamperproof Deactivation Protection
- Granular Access Controls
- Installs and protecting within minutes

#### **Veeam Backup Without Blocky**

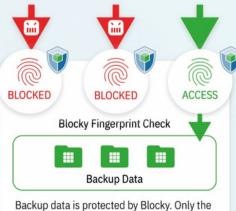

The user no longer has access to their data.

**GRAU** DATA

Your data \ Your control \_

#### **Veeam Backup With Blocky**

Backup data is protected by Blocky. Only the whitelist application can modify data.

### Maximum Ransomware Protection: Safeguarding your Veeam Data with Blocky

Ransomware attacks continue to present an ongoing and significant challenge for businesses, with their potential consequences becoming increasingly severe. Traditional security solutions and data backups alone can no longer guarantee safety against such threats. To establish a maximum defense, it is essential to fortify your backup repository with an innovative solution: Blocky. This powerful addition to Veeam introduces a robust, zero-trust architecture that enhances the security and resilience of your backup data.

Blocky leverages GRAU DATA's Windows filter driver technology to swiftly transform your Veeam backup repository into a write once, read many (WORM) environment. By doing so, it establishes a formidable barrier against ransomware corruption. This pioneering approach ensures that only authorized and trusted Veeam processes have exclusive access to modify or delete data, effectively blocking all other processes.

In addition to its protective features, Blocky equips Veeam administrators with comprehensive event monitoring and reporting capabilities. This enables prompt detection of potential threats or anomalies, empowering proactive response and mitigation strategies.

Seamless integration with your existing Windows backup server eliminates the need for additional hardware or the complexities of Linux integration. Blocky's straightforward installation process enables swift deployment within your Veeam environment, providing a cost-effective solution for strengthening your ransomware defenses.

Don't miss the opportunity to experience Blocky's capabilities firsthand with a free 30-day trial. Take decisive action today to safeguard your Veeam backup data and shield your organization from the perils of ransomware attacks.
