Blocky for Veeam®

Don't Add Complexity to Your Veeam. Blocky Delivers Instant Ransomware Protection in 20 Minutes.

Overview

Veeam is a popular choice for backup solutions due to its simplicity and cost-efficiency. Shouldn't adding ransomware protection be just as straightforward? Blocky for Veeam delivers robust ransomware protection without introducing additional complexity or breaking your budget.

The Problem

Small to Medium-sized Businesses (SMBs) face unique challenges, including tight budgets and limited IT resources. The rising tide of ransomware threats demands quick action, but the last thing SMBs need is to compound their existing challenges with a complex and costly solution. The idea is simple: add robust ransomware protection to your existing Veeam infrastructure without requiring new servers, additional storage, or any other overheads that can stretch your resources thin.
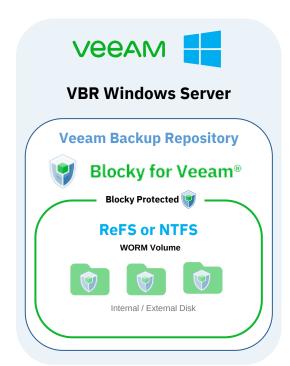

The Solution

When SMBs add Blocky to their existing Veeam infrastructure, they are choosing the only ransomware protection solution that addresses these challenges head-on. Blocky instantly transforms the Windows VBR into an immutable, zero-trust repository in under 20 minutes. This powerful solution shields the Windows ReFS and NTFS volumes from ransomware attacks and does so without necessitating Linux, additional hardware, or specialized servers or storage.

The Results:

1. Ransomware-Proof: Quickly and effectively transform Veeam Windows server into an immutable, hardened repository for maximum protection.

2. Cost-Effective: Blocky's seamless integration with existing Veeam infrastructure means no additional hardware expenses.

3. Time-saving: Your IT teams can bypass the usually time-consuming complex integrations, allowing them to focus on other essential tasks instead.

By choosing Blocky for Veeam, SMBs not only fortify their data protection strategy but also do so in a way that is uncomplicated, budget-friendly, and efficient. Why add layers of complexity when Blocky offers a comprehensive ransomware solution right out of the box?
